## Summary

Throughout all my job experience, I have acquired different sets of skills that pertain to customer service, technology and sales, all of which positively represent each company I've worked for. Always striving to learn at a high level and will be a team player on any assignment I am appointed to. Completed University of Utah's full-stack software development bootcamp focusing on the MERN Stack. Actively looking for a role as web developer.

## WEB SKILLS

### Proficient in the MERN Stack

#### Front-end Technologies

HTML, CSS, Bootstrap, Materialize, Bulma

JavaScript, React, JQuery, AJAX, Axios, ES6,

Object Oriented Programming

#### Database Technologies

MySQL, Sequelize, NoSql,

MongoDB, Mongoose

#### Other Technologies

Git, Github, Command line

## Projects

### Trade and Play

- Trade and Play is an application that allows users to register and signup using Passport.js for authentication. A user can collect NHL sports cards through booster packs and build a collection. Future plans for this project would be to allow users to trade cards with other users on the application. This project

was built with the MERN stack and I was in charge of database management and user authentication.

### **Employee Directory**

- React.js front-end application allows users to view their entire employee directory at once so that they have quick access to their information. Currently employees are being brought in from the RandomUsers.me API

### **Recreation Sports League Manager**

- This application was built with Node.js, Express, MySQL with custom ORM and Handlebars templating engine. Users can create, manage and join recreation sports leagues. Users must register and signup with Passport.js for authentication. This was a group project and I was in charge of database management, back-end and front-end functionality.
